▣ EXECUTIVE OVERVIEW

WWT is an Advanced Implementation Provider in the F5 Guardian Professional Services Partner Program. We employ more than 10 F5 certified technology specialists skilled in F5 LTM/GTM/APM and they are able to assist customers in architecting and deploying solutions to meet their ever growing technology challenges.

With the recent announcement of the F5 iSeries, which is F5's newest, bigger, better, faster and first ever field programmable ADC, customers have been challenged with deployment decisions around code upgrades, consolidation, automation and migration to the new iSeries platform.

▣ PROFESSIONAL SERVICES

With these challenges in mind, our professional services engineers can provide the following services in the aforementioned areas:

- **Code Upgrade Services** – The new F5 iSeries hardware will now only support version 12.x of the TMOS operating system. This means customers must either upgrade their code on their existing systems or upgrade their code during the migration process. Our engineers can assist customers with code upgrades either during pre-migration or while ADC services are being migrated to the new F5 iSeries hardware
- **Consolidation Services** – The new F5 iSeries platform is bigger, better and faster. We can consolidate ADC services from numerous legacy ADC's to a single HA pair of F5 iSeries hardware.
- **Physical-to-Physical Migration Services** – When consolidation is not an option for customer's such as DMZ networks or multi-tenant environments, we can perform a 1-to-1, physical platform to physical platform migration of legacy ADC's to the new F5 iSeries platform.
- **Physical-to-vCMP Migration Services** – With the increased resources available in the new F5 iSeries hardware platform, we can assist customers in migrating their under-utilized, legacy ADC's to a virtualized environment utilizing vCMP. Choosing a physical to virtual migration path utilizing vCMP allows customer to have available resources for future growth all while taking advantage of the underlying hardware benefits of the F5 iSeries.
- **F5 Automation Services** – Automation is becoming more mainstream for enterprise IT organizations. Our engineers can deploy F5 products on the F5 iSeries utilizing industry standard automation techniques and educate customers on how to use these toolsets and incorporate best practices into their day to day administrative tasks.
